

The conditions required to show "Touching Reality" are:

- The work must have a dedicated room (either an existing one, or one especially-made)
- The room minimum dimensions are: 8m long x 6m large x 3m high, but a larger room is better, as long as the general shape is similar (rectangular shaped room). A smaller room is not possible to show the work,
- The video screens covers almost entirely one of the walls (so the picture size is approx. 3m high, and as large as possible),
- The room must be painted in dark grey (except of course the frame for the video which stays white)
- There must be an entrance to the room, but NO door, NO curtain, NO physical separation, just an opening
- This entrance must be situated on the SIDE relatively to the video screen (not in front).
- Technically, the video can be either burnt on a DVD that we send you, or an mpg file that we send over the internet. So you will need either a dvd or media-player (or computer) connected to the projector
- The projector type doesn't matter, as long as it can give a large enough picture
- There is no sound on the video
